

## Workshop for economic modeling in Julia

Here are some preparations needed before the workshop begins. Please go through the following steps to complete the required installations:

1. Installing Julia: <https://julialang.org/downloads/>
2. Installing VS code: <https://code.visualstudio.com/download>
3. Open VS code, select  (extensions) on the left, search for Julia, and then install the Julia extension:

4. Turn on VS code -> Terminal -> New Terminal -> In the Terminal (the rectangular window at the bottom), type: `Julia --version`

If Julia is installed properly, you will see something like "julia version 1.12.2". Otherwise, repeat previous steps.
